Michael Bender

SENIOR CONTENT DEVELOPER | Reports to: Kumud Dwivedi

Connect Oct 2025

Reflection Period: Apr 18, 2025 - Oct 14, 2025

Impact is **what** you accomplish - and **how** you do it matters just as much.

WHAT

What results have you delivered for your goals, keeping security, quality, and AI in mind?

HOW

How have your behaviors and actions led you, your team and Microsoft to excel, grow, and build trust?

Reflect on the past

What results did you deliver, and how did you do it?

What impact was delivered

Goal #1. Content for Customers

- Led efforts in Portfolio Simplification project for two pillars: Load balancing and Content Delivery, Network Foundation, including leading all-team and pillar lead meetings and participating in project meetings.
- Gathered feedback from MVPs on updated documents, resulting in the delivery of 12 updated TOCs, 5 new pillar hub pages, and 4 pillar overview pages across the Azure Networking doc set.
- Triaged all Unified User Feedback submissions and created work items for actionable issues, closing the majority of UUF items within 30 days, with only one latency-related issue still open due to engineering wait times.

- Worked with product PMs and teammates to maintain high freshness and engagement metrics for Load Balancer, IP Services, and Azure Virtual Network Manager content, achieving 98.6% docs engagement and 80% freshness despite a drop due to competing priorities.
- Participated in archiving and curation efforts across IP Services (primary) and Load Balancer catalogs. Through this work we archived 17 articles across both services.
- Created 101 content PRs and closed 106 across all services.
- Led the AWS to Azure migration effort for Load Balancing scenarios, delivering 2 migration articles for Application Gateway and Load Balancer in collaboration with Chase Dovey, Patterns & Practices, product group PMs, and SMEs from the field.

Goal #2. Team

- Participated in the Azure Networking Doc-A-Thon, presenting on using AI tooling for content creation and assisting PMs with multiple facets of the pull request and doc update process, which contributed to PMs updating over 220 articles across Azure Networking.

Goal #3. Operational Excellence + AI

- Developed a custom agent mode for Github Copilot to fact check documentation against all public-facing Microsoft document repositories, which during the AWS to Azure Migration doc creation process enabled quick research and fact checking of service comparisons, reducing time to production and identifying 4 articles with non-matching data.
- Led a bi-weekly AI Stand-up with the Azure Networking docs team to discuss AI usage, demonstrate AI work, and share tips; this was discontinued in August and September due to Shark Tank project work.
- As part of the Shark Tank project, I worked with our team to share & promote the usage of MCP servers. This included using the Microsoft Learn MCP server as well as showing others how to create their own MCP Server.
- During the Azure Network Hackathon, I introduced our PMs to AI tools including **Documentor** and **Github Copilot Chat** for improving documentation, finding information about a directory of articles, and general AI prompting principles.

Summary of security impact

I contributed to Microsoft's overall security posture by ensuring the accuracy and reliability of public-facing documentation through the development of a custom Github Copilot agent mode for fact checking, which identified discrepancies in existing articles and supported timely, accurate content updates. This proactive approach to content validation helps prevent misinformation that could impact customer trust and security. Additionally, by triaging Unified User Feedback and collaborating closely with product teams, I helped maintain high-quality, fresh documentation that supports secure and compliant use of Azure networking services.

Diversity and Inclusion Contributions

- **Microsoft Change Agent for Ronald McDonald House of Madison**
Guided the organization on leveraging Microsoft products like **Copilot** and **Azure AI Studio** to address operational challenges. Currently collaborating on an **AI Agent** to assist volunteers and staff with house policies and procedures.
- **Community Engagement**
Organized local volunteer opportunities for Madison-based FTEs and served as **Co-chair of the Madison Microsoft FTE community**, fostering inclusion and collaboration. Also I've continued my work on the **Board of Directors for Forward Perform Arts**, a non-profit that promotes leadership and life skills within the performing arts communities throughout Wisconsin.
- **Personal Growth**
Completed diversity and inclusion training and reflected on strategies to recognize and reduce personal biases.

Reflect on recent setbacks - what did you learn and how did you grow?

One key learning from the Azure to AWS migration project was the importance of upfront clarity. We underestimated the iterative work required and initially planned to run three articles in parallel. This led to significant rework and delays. By shifting to a serial approach, we improved quality and flow, though we missed our deadline by six weeks. I've grown by learning to ask deeper questions at the start, document review processes and requirements early, and estimate more realistically. I now approach projects with a stronger focus on planning, collaboration, and adaptability—ensuring smoother execution and better outcomes.

Manager comments

Quality Content for Customers

Michael, you own the content portfolio for Application Gateway, Load Balancer, and Virtual Network Manager networking services in Azure that includes 331 articles with 171K monthly page views maintaining high engagement and freshness metrics (98.6% engagement, 80% freshness).

You have led the Portfolio Simplification project, gathering MVP feedback resulting in updated TOCs and new hub pages, triaged and closed almost 100% of Unified User Feedback (UUF) items within 30 days, and published Security guides for Application Gateway & Load Balancer, and two *AWS to Azure Migration* guides that addressed aligned with one of the Solution plays for the semester.

In addition, you established baselines metrics for the Portfolio Consolidation project, and presented impact of changes made due to the content published/updated in the following months to the ACC leadership.

Team

Michael, you supported both your content team and the Product team by designing training sessions and presenting how to use AI tools for authoring content to help with the *Azure Networking Doc-a-thon* event. As a result, you enabled PMs in updating over 220 articles. You have actively participated in *Start the Week* meetings and shared your learnings on productivity, mindfulness, and AI. You collaborated with your peers to build the FY26H2 content plan for the Krypton semester. Great job!

Your support in content authoring is appreciated by PMs as illustrated by the following feedback:

Michael, thank you for your collaboration on the Application Gateway reliability guide updates. You delivered a solid first draft, which made it much easier for us to work together to add additional information. In particular I appreciated how you were able to coordinate pulling together the right people to assemble information and decide how we'd best represent it to make the document useful to customers while also making sure it aligns with the PG's framing. One thing that I really appreciated was how, when you were away for a few days, you made sure to we had direct contacts to the PMs in the PG so that work could continue in your absence. We've ended up with a document that very thoroughly describes how the service supports resiliency and reliability, which is fantastic. Thank you!

John Downs

PRINCIPAL SOFTWARE ENGINEER

I thoroughly enjoyed working with you through various milestones of NSP. Be it educating me on how to make minor changes myself or ensuring large changes are live on time, you have always been available to help. I really appreciate the way you handled the last-minute content changes during our product launch. You stayed flexible, quickly adapted to the new requirements, and ensured everything was accurate and ready on time. Your calm approach under pressure and commitment to quality made a big difference in the success of the launch. I find you to be highly reliable, collaborative, and someone I can always count on.

Chaithanya Rai

SENIOR PRODUCT MANAGER

Operational Excellence + AI

Thanks for developing a custom GitHub Copilot agent mode for fact checking documentation, which aided the AWS to Azure migration documentation by reducing research time and identifying discrepancies. In addition, you also led bi-weekly AI stand-ups that helped with awareness of new AI tools to help with authoring and increase operational efficiency. You tracked and maintained all your Bromine content deliverables efficiently in Azure Dev Ops making it easy for me to share our accomplishments in MBR and QBR meetings to both Content and Product LTs.

Michael, you have been one of the key change agents on this team for AI transformation and adoption that has propelled our team to be one of top teams showing the most growth in this area. In addition, your presentation on using Documentor and GitHub Copilot Chat for improving documentation, finding information about a directory of articles, and general AI prompting principles helped PMs successfully participate in the Azure networking doc-a-thon.

Security impact

Thanks for supporting the Security initiative by Mathew Baldwin and authoring the security guide for [Load Balancer](#) based on the security baseline article for this services. You contributed to Microsoft's security initiative by ensuring documentation accuracy through AI-driven fact checking and timely triage of user feedback, which supports secure and compliant use of Azure networking services. This reflects a preventative approach to maintaining trustworthy content that can influence customer trust and security.

Diversity & Inclusion

Thanks for your continued commitment in working for betterment of our communities by organizing of local volunteer opportunities with local FTEs and completing the diversity and inclusion training that reflect on how to improve your biases.

Plan for the future

What are your goals for the upcoming period?

Goal #1. Deliver secure, high-quality content for customers

- Improve discoverability and cross-service enablement of Azure Network capabilities by delivering the Azure Network Cross-services spotlight project, including integrated guidance and usability enhancements, by the end of **Semester FY26Q3**, with success measured through engagement, findability, and enablement metrics.
- Increase customer engagement with Azure Load Balancer how-to articles by **10%** (measured via page view and click-through rate) by **standardizing scenarios, naming conventions, and configuration settings** across all Load Balancer articles by **end of Q3 FY26**. This will reduce context switching and improve cohesion across related content.
- **Identify and resolve the top 5 CSS-related customer support issues in Application Gateway by Q2 FY26** by analyzing telemetry signals, support tickets, and user feedback, and

implementing targeted content updates in Learn. Ensure updates align with FY26 Learn KPIs for content quality, engagement, and AI-readiness.

Goal #2. Work better together with peers & partners

- Deliver the **Azure Network Cross-services spotlight project**—featuring co-authored guidance, shared use cases, and partner-validated scenarios—to improve cross-team collaboration and partner integration by the **end of Semester FY26Q3**, with success measured through engagement, enablement, and trust metrics.
- Reduce Application Gateway-related support tickets by 15% by publishing at least 3 new or updated troubleshooting guides and validating improvements through CSS and CXP feedback by the end of Q2 FY26.

Goal #3. Continuously improve and innovate

- Increase AI-readiness and maintainability of Virtual Network and AVNM documentation by implementing an AI-first framework using includes files, generalized procedures, and resource tables—targeting the creation of at least 100 includes files and adoption in 75% of relevant articles—by the **end of FY26Q2**.
- Complete **User Acceptance Testing for the Content Developer Authoring tool** by **end of FY26Q2**, validating at least 5 critical workflows and submitting a minimum of 10 actionable feedback items to improve usability and efficiency, in collaboration with Duong Au and the team.

How will your actions and behaviors help you reach your goals?

To reach my goals, I'll grow with curiosity and adaptability by embracing AI-first frameworks that improve content maintainability and readiness—especially across Virtual Network and AVNM docs. I'll collaborate across teams and with partners to co-author the Azure Network Cross-services spotlight project, integrating shared scenarios that enhance trust, discoverability, and engagement. By moving fast with purpose, I'll standardize Load Balancer content and resolve top Application Gateway support issues, reducing friction and improving customer enablement. I'll also use telemetry, feedback, and support signals to guide updates that align with Learn's FY26 KPIs. These actions will help me deliver secure, high-quality content while fostering innovation through intelligent systems and inclusive teamwork.

Manager comments

Michael, your goals are in alignment with both [FY26 Learn Content Goals CD](#) & [Azure Core Content Plan Krypton FY26Q2-Q3](#).

FY26 Learn Content Goals:

- Deliver high-quality content for customers
- Continuously improve and innovate
- Work better together with peers and mentors

FY26Q2-Q3 Azure Core Content Plan Krypton Investment Areas:

- Maintain quality content
- Continuously improve and innovate
- Team with peers and partners
- Help customers solve problems
- Help customers make good technology decisions
- Help customers learn new technology

Looking forward to your contributions and working together for the Krypton semester!
